

Ozan Özayranci

Software Engineer

About Me

With over seven years of experience in software development I've learned the value of working closely across teams and making sure things run smoothly from code to production. I like to build solutions that are reliable easy to maintain and that help the team move faster. I also enjoy supporting others whether it's by sharing what I've learned or helping them explore new tools and ways of working. For me good collaboration and continuous improvement are just as important as writing code. Built and deployed several side apps, including a Pokémon battle simulator ([PokeWar](#)) See [oozan.dev](#) and my [GitHub profile](#) and few of [my work projects](#) for other details.

Work Experience

Nov 2024 - present

Sahibinden, Istanbul-Remote

Software Developer

- Redesigned authentication system using Node.js and Azure AD, improving login reliability for over 10 million users daily.
